## R.T. BULLOCK BUILDS THE WORLD'S FIRST FLOATING FURNACE WITH OKKO SYSTEM 1000

**OKKO SYSTEM 1000** has been used to construct what is said to be the largest permanent furnace in Europe.

The furnace was built on a large floating pontoon at the new works of S.I.F. BV. Roermond, Holland. Who are fabricators of large reactors and pressure vessels.

### CHANGE OF SITE

Original siting of the furnace was to be in the large fabrication shops at S.I.F. but due to last minute changes it was decided to build the furnace on a pontoon lying in the enormous dock adjoining the S.I.F. works.

Only OKKO SYSTEM 1000 could provide such flexibility in requirements. The system again proved that large structures can be rapidly built in modular form without the need for conventional planning and design.
