

RON BULLOCK LIMITED

INTERNATIONAL HEAT TREATMENT CONSULTANTS & ENGINEERS

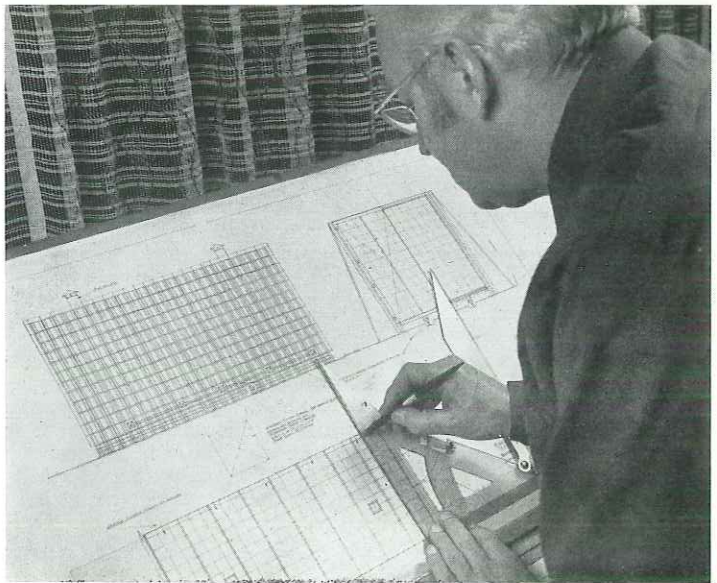

BRIERLEY HILL, WEST MIDLANDS, ENGLAND . . . HOUSTON, TEXAS, U.S.A.

ON-SITE HEAT TREATMENT FOR THE "BIG ONES"

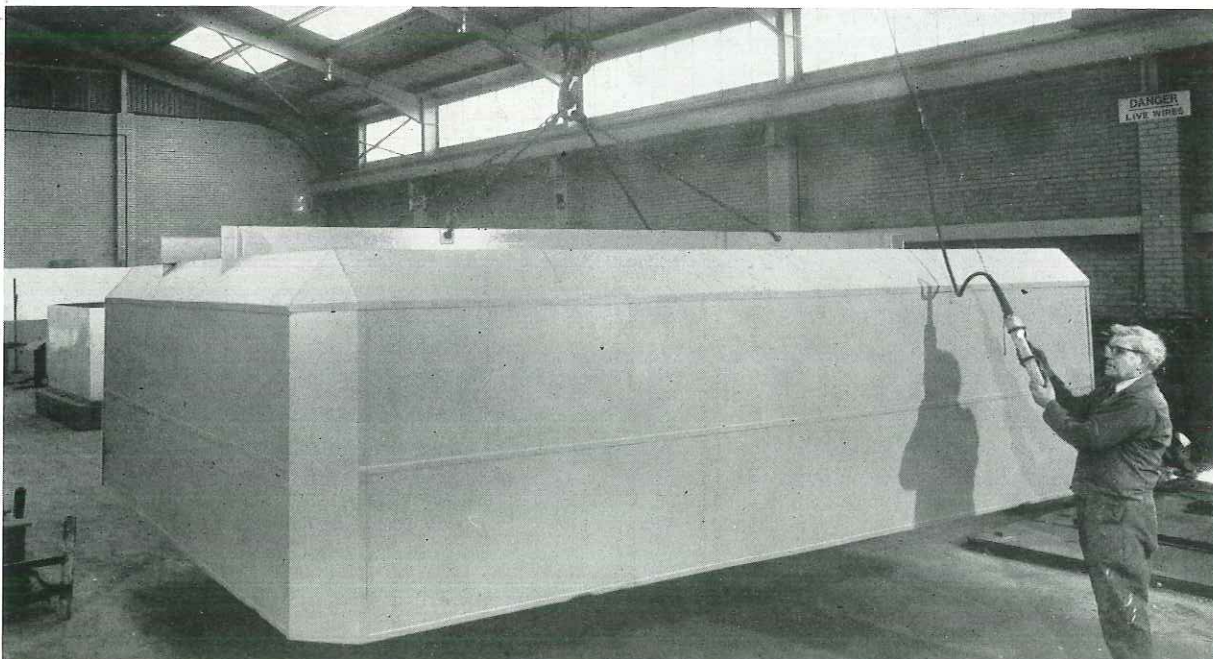

Backed by practical experience in taking heat treatment to large structures in many parts of the U.K. and Europe, the Ron Bullock Consultancy now operates from Brierley Hill in the West Midlands of England and from Houston in Texas, U.S.A.

The consultancy specialises in off-shore drilling installations offering a comprehensive service from initial inspection to final supervision. Large structures often develop faults which can only be effectively dealt with on-site, on or off-shore.

Backed by a practical knowledge of engineering design, heat treatment procedures and specifications, Ron Bullock provides this service to major oil companies and their contractors. From initial inspection the service provides detailed procedure, engineering design and stress analysis, supplier recommendations and full on-site supervision.

It all starts on the drawing board where all facts are considered, as detailed plans are prepared.

A typical lift off cover type furnace for in-house heat treatment of drilling tubes, modular pipe work and grey iron castings being lowered into position.
